

Invitation

Workshop “Process Integration with SAP PI” Eindhoven

We are happy to invite you to our Process Integration workshop in Eindhoven. This information and knowledge exchange event is intended for SAP PI experts, users and for interested newcomers to this topic.

Workshop Details

Date September 10th, 2009
Time 13.00 – 16.30
Location cimt b.v.
Bogert 1
5612 LX Eindhoven (The Netherlands)

Topic

Efficiency and cost-reduction have become today’s hot topics and Process Integration alongside with it. Process integration is more than a buzzword: It's a concept with great potential for a huge increase in productivity and cost-reduction. It takes your data processing to the next level. During our Information Day "Process Integration with SAP PI" in Eindhoven we will give you detailed insights how Process Integration with SAP PI works in different business environments.

The workshop is build around the core components of the SAP PI integration platform. We will show the data-exchange between the classical SAP PI and various systems. Moreover, we will show you the steps to integrate and connect your systems. A typical integration project with its essential project-steps will also be discussed. This leads up to the concept of Service Oriented Architecture (SOA). We will combine a standard SAP PI service, classic SAP and the Web to demonstrate the SOA concept.

Our Background

The presented solutions have been developed in-house at cimt and have been implemented for our customers. We have build up extensive experience in XI and PI throughout its evolution, from the SAP XI 2.0 up to the current version 7.10. We provide the whole spectrum of services and consulting in this area:

- Initial implementations - Installation of a starter kit.
- Enhancement of existing system landscapes.
- Maintenance and support of a process / service-oriented landscape via our Service Center.

Earlier Events

This workshop was previously given in Cologne and Arnt Zimmermann - board of directors - used these words to conclude it.

"I would like to thank our guests once again sincerely for the lively participation in this event. The large interest already during the organization of this workshop strengthened our conviction that we are on the right track: Already since our start in business we are connecting processes and design system architecture based on the SAP ERP platform. Our customers can not only rely on our technical excellence and long-time experience but also on our engaged colleagues with a broad knowledge in new strategic processes and system landscapes."

Why should you attend?

You are working with a complex environment where data processing and information exchange between you and your customers or suppliers is a key requirement to run your business successfully. You want to learn more about:

- Automated and monitored exchange of data with your customers and suppliers.
- Reducing redundancy and complexity within your system landscape and organisation.
- Cost cutting and optimizing opportunities.

Get a detailed insight on how the implementation of SAP PI helped our customers and which benefits it can bring to your business.
